

STARTEXT SMOOTH

Startext Smooth is an innovative laser & inkjet paper that simply puts other brands of paper in the shade, due to its amazingly real print results and optimum colour brilliance, even in the most widely varying machines or with the most varied colours.

Startext Smooth is a perfect complement to the technical demands of colour laser & inkjet printers. The complex interrelationship between printing inks and recording material no longer presents a problem.

Application

Specially developed for standard applications (b/w and light colour applications), Startext Smooth deskprint, with 720 dpi resolution, is the perfect paper for text documents and tables. The high degree of whiteness allows colours to stand out in strong contrast, and in addition, the smooth surface of the paper gives it a silky feel. The higher weights of paper are also ideally suited to double-sided printing.
